

Ms Emma Jude

Emma Jude is an outstanding and engaging geoscientist, whose career has already contributed enormously to BP projects and the wider geoscience community.

With experience in reservoir sedimentology, geocellular modelling and highly integrated studies for both traditional hydrocarbons and CCS, she has published and presented some of her industry technical work at multiple high profile conferences, and is highly respected within BP and internationally as an exceptional geologist and communicator. She serves on the committee of the Geological Society's Energy Group and has also contributed a significant amount of her own time to public engagement in science, including applying her work as a trained fine artist to run interdisciplinary drawing classes for the Geological Society, Geologists' Association and UK museums.
